

ClickBank Multi Product Manager

Installation Guide and Tutorial

Grab our free courses from the link below:

Free Courses: www.MyFreeCourses.com

Installation:

- 1) Create a **mysql** database and assign a user to it in your hosting account
- 2) Edit the file **connect.php** and replace the string "**CLICKBANKID**" with your real Clickbank ID on line number 3.

Insert your database details like hostname (usually "**localhost**"), database name, user and password in lines 5 to 8 in the **connect.php** file and save the file.

- 3) Edit the file **auth.php** and replace the "**admin**" and "**123456**" with desired username and password to access your script control panel.
- 4) Create a folder name '**cmpm**' on your server.
- 5) Upload all files into the newly created folder at: **cmpm**

6) Go to : <http://yourdomain.com/cmpm/createdb.php> to install the database tables. You should get a message "**Database table created successfully**" if everything goes fine.

(If there was some problem in this step, just use your "MyPHP Admin" and populate the content of the file **database.sql** to your database.)

That's it... go to <http://yourdomain.com/cmpm/index.php> and login with your username and password (defined in step 3 above).

Using the script

When you login to the script control panel, you will see a special URL address on the first line of the page. it says:

Note: Below is the URL that you should specify in your
Clickbank --> Account Settings --> My Site --> "HopLink Target URL"

<http://yourdomain.com/cmpm/cb.php>

This is the URL you should define in your **Clickbank** account as your "**HopLink Target URL**", and by doing this, the script will redirect the traffic from your affiliate links to the right product page.

Next, you will see a sample product already set in the script as product number 1, just click the "edit" link to the right of that product and change to your default product name and URL and click the "Update" button.

Note: product number 1 is your default product, so if someone will visit your regular Clickbank affiliate URL (<http://affid.yourID.hop.clickbank.net>) , the script will redirect the visitor to product number 1.

From this page you can add more products, just click the "**Add New Product**" link at the bottom of the page and add new products.

(**Note:** use only numbers within the "Product Number" field.)

Get your Affiliates URL's :

Click the "[Affiliate URL'S](#)" on the top menu of the page and it will display the URL's you should provide to your affiliates for every product you added.

(**Note:** Remind your affiliate to replace the "**affid**" with their real Clickbank affiliate ID.)

You can also tell your affiliates to add a tracking variable to the end of the affiliate script. so the link will look like: <http://affid.yourid.hop.clickbank.net/p=2&tid=ppcgoogle>

(the [&tid=ppcgoogle](#) part is the tracking variable)...
